

## Benefits

- Tight integration of i-PRO equipment with Extreme's wired infrastructure
- Leverage Extreme's Fabric Connect technology for high-quality video security
- Fast network reconvergence for an always available video security solution
- Massive scaling of thousands of video streams

## Integrations

- i-PRO security camera and equipment
- Extreme Fabric Connect technology available on Extreme Networks 5000 Series and VSP switches

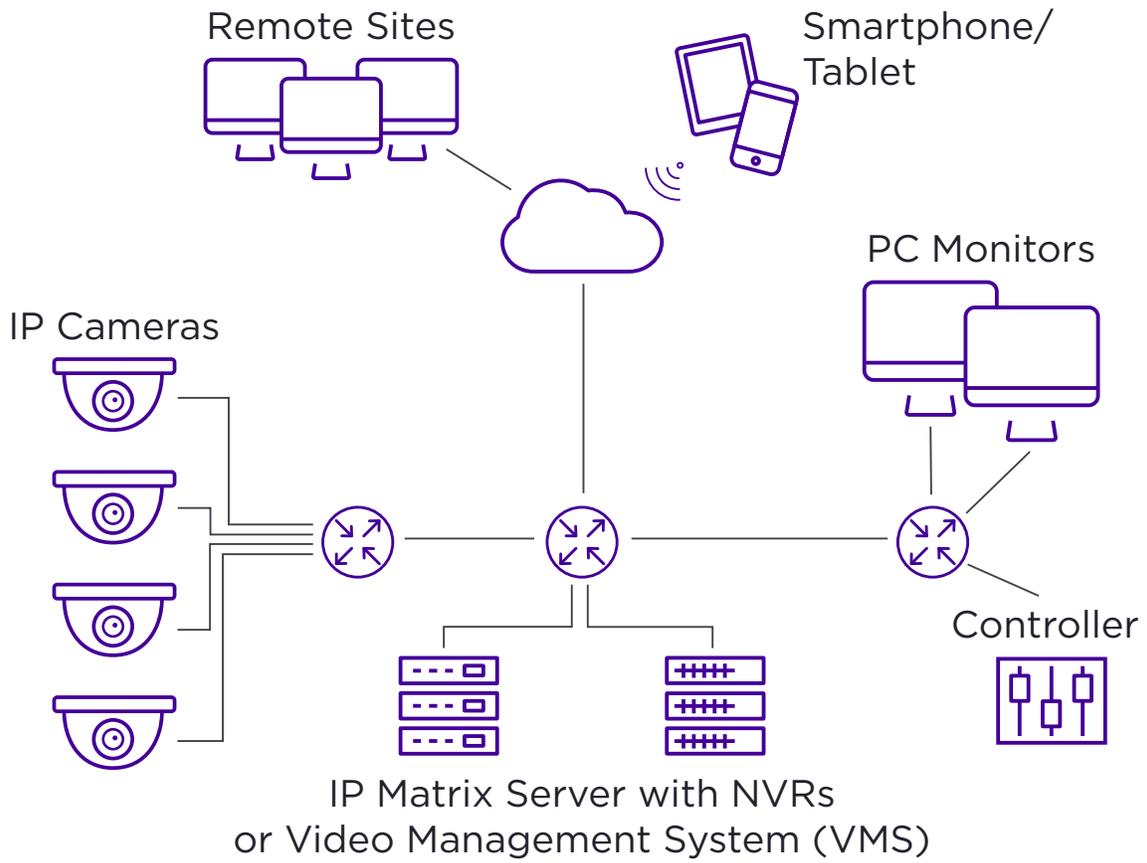

# Scalable, Always-On Video Surveillance

## Extreme Networks Integrates With i-PRO Security Cameras

The use of video for safety and security is rapidly growing in public spaces as well as large organizations. While video surveillance monitoring has traditionally been limited to security operations centers, the ability to use IP networks opens up a myriad of challenges and opportunities for accessing live and recorded video.

Extreme Networks has partnered with i-PRO to enable the automatic capture of evidence at the highest quality under dynamic and challenging surveillance environments. i-PRO provides a wide range of solutions in order to maintain high-level surveillance capability regardless of the installation site, weather condition, or purposes. The tight integration of the i-PRO security cameras with the Extreme's Fabric Connect infrastructure allows for massive scaling of video streaming and a reliable, always available video security solution.

Extreme's Fabric Connect technology provides unmatched scalability, flexibility, and ease of deployment for IP based video surveillance solutions. The Extreme Fabric creates an agile, reliable, virtualized network where you can deploy services at the edge and your applications can run up to 31x faster due to the ability to automate many of today's manual network processes. The result is a simplified and streamlined network with the stability and resilience needed for today's advanced video security applications.
