COURSE OVERVIEW

One takes a deeper dive into our ExtremeCloud IQ platform, and answers the questions: What is Cloud Networking, how does it work? and how do you manage it? Across the episodes, we focus on topics such as Cloud, Security, Management, Troubleshooting and Deployment.

WHO SHOULD ATTEND

This course is designed for individuals who are new to the field of cloud-based networking or those who have some experience and want to enhance their knowledge and skills.

COURSE OBJECTIVES

- Upon completion of this course, you will be able to complete the FREE certification exam which will award you the Extreme Certified Associate in ExtremeCloud IQ digital badge.
- Display your digital badge on your LinkedIn profile to demonstrate your credibility, your commitment to continuous learning and growth, enhanced visibility, and potential networking opportunities.

AGENDA

What Is Cloud?

In this module we unpack the term 'Cloud'.

ExtremeCloud IQ Architecture

When you understand the Architecture of ExtremeCloud IQ, you'll also understand why we built it the way we did and the implications it has on your business in the areas of privacy, GDPR etc.

Cloud Agnostic?

The term 'Cloud' can be a little misleading as it seems to imply a singular entity. In reality, we understand that there are many 'Clouds.' Being tied into a single Cloud is not part of our Vision and in this short module we will explain what we mean by the term 'Cloud Agnostic'

Vision

At Extreme we have a vision for the future of networking and ExtremeCloud IQ is central to pull this vision into reality by providing end to end management of your entire infinite network from a single pane of glass.

AGENDA CONT'D

Let's Talk About Security

We bring this complex topic down to a level anyone can understand by dealing head-on with many of the terms and concepts people throw about and often don't really know the meaning of.

Monitoring Your Network Devices

It's one thing to have great technology, but it's another matter entirely to not be overwhelmed by it. We take a look at how to go about monitoring a network from ExtremeCloud IQ.

Deployment Discovery And Provisioning

How does a device that comes out a box just 'know' how to talk to the Cloud? It's interesting and it's clever.

Troubleshooting And Management

Every Network Administrator in the world will continually need to troubleshoot and manage computer networks. We share some best practices that we've learnt over time when specifically dealing with Wireless Networks.

How And Where To Get Help When You Need A Helping Hand Demos

- Account creation
- Adding location
- Updating Firmware
- Creating an SSID
