Benefits

- Reliable, secure wireless connections to 4G LTE and 5G networks
- Backup routing for critical locations and branch offices

Integrations

- Extreme Network Fabrics™
- ExtremeSwitching™
- ExtremeCloud™ IQ

Mobile Broadband Connectivity Solutions

Integration of Extreme Networks with Inseego

Get your critical services up and running quickly and easily with the fastest internet connection available, from any location. Inseego's 4GLTE and 5G portfolio delivers unmatched performance, reliability, and security with a wide range of options to fit your organization's needs and ensure maximum uptime during common network interruptions, including:

- **Enterprise-grade Gateways and Routers:** Reliable, secure wireless connections to 4G LTE and 5G networks for rural clinics or to provide backup connectivity for hospitals and doctors' offices.

- **Fixed Wireless Access (FWA):** Next-gen indoor 5G router, plug-and-play VoLTE phone service system and a 5G network-extending product for edge-of-network locations.

With Inseego and Extreme Networks, you will eliminate the high costs associated with wired primary and backup connections, enabling greater ROI and lower cost of ownership for cloud and IoT initiatives.

Cellular WAN and Backup Connections for Remote Locations

Optimized for Enterprise IoT

Inseego provides a broad portfolio of IoT solutions for critical applications, including:

- SD-WAN networks: Ultra-reliable connections for non-stop business continuity
- Critical infrastructure: Fast, secure solutions for remote monitoring and control
- Private networks: Robust connectivity for campus environments
- Smart factories: Low-latency connections for industrial automation

Purpose-built products

- Rugged, industrial-rated devices with 24 x 7 x 365 reliability, even in harsh environments
- Versatile deployment options including fixed and mobile installations with cellular, Wi-Fi, Bluetooth, ethernet and USB connections, and multiple power options
- Multi-carrier, dual-SIM support for instant failover and deployment flexibility

Trusted security

Designed and developed in the U.S., Inseego has decades of experience in providing trusted, proven wireless solutions with multiple layers of hardware, software and network security.
