

Project Management for Professional Services

Extreme Certified Expertise will:

- Define project objectives/deliverables
- Strategize project direction
- Outline the implementation process
- Manage scope
- Increase efficiency/communication
- Reduce risk
- Reduce in-project costs
- Allocate resources
- Prioritize workstreams
- Assist with administration/procurement
- Aid inventory management
- See project through to closure

Today's network infrastructures are more complex than ever. Organizations want to simplify and secure their IT environments while keeping up with constantly changing market conditions and stakeholder demands. Legacy networks can't effectively support hybrid IT environments that consist of a mix of on-premises, cloud, and SaaS technologies, in addition to bandwidth intensive collaboration services and applications required by hybrid work.

IT teams need to merge new technologies and legacy infrastructures to outpace competition while struggling with limited automation, widening skills shortages, and increasingly complex licensing. These factors make it challenging to optimize IT environments.

Extreme Networks helps businesses achieve outcomes by delivering networking solutions that enable the Infinite Enterprise. The Infinite Enterprise delivers infinite distribution of users and locations that require secure connectivity, the ability to scale both operationally and technologically, and consumer-centric experiences that are demanded by both IT teams and users.

Summary of Services

Extreme's Project Management Services helps organizations define predictable technology outcomes, leveraging our in-depth experience with planning and deploying complex technologies into client environments.

We help deliver successful projects, on-time, and on-budget. Extreme ensures that all project members are identified, tasked and coordinated to deliver. We help identify risks and develop mitigation strategies to eliminate or minimize risk. Extreme brings lessons-learned, expertise, structure, and effective management practices to ensure successful project outcomes.

“Our team brought the expertise of our terminal, the expertise of our infrastructure, and our business needs to Extreme. Extreme brought us a migration plan and an implementation plan and executed that plan on behalf of us, and it was done in a very collaborative way.”

Mill Lawson, Director of IT Infrastructure, Georgia Ports Authority
